AMENDMENTS TO THE CLAIMS

Kindly amend claims 1, 15-16, and 21 as shown in the following listing of claims. The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (Currently Amended) An apparatus for performing cryptographic operations, comprising:
fetch logic, disposed within a microprocessor, configured to receive a cryptographic instruction, wherein said cryptographic instruction is one of the instructions in an application program being executed by ~~as part of an~~ instruction flow executing on said microprocessor, wherein said cryptographic instruction prescribes one of the cryptographic operations, and wherein said cryptographic instruction prescribes one of a plurality of cryptographic algorithms;
algorithm logic, disposed within said microprocessor and operatively coupled to said cryptographic instruction, configured to direct ~~microprocessor~~ said microprocessor to execute said one of the cryptographic operations according to said one of a plurality of cryptographic algorithms; and
execution logic, disposed within said microprocessor and operatively coupled to said algorithm logic, configured to execute said one of the cryptographic operations, wherein said execution logic comprises, in addition to an integer unit for executing integer operations prescribed by said application program, a cryptography unit for executing a plurality of cryptographic rounds required to complete said one of the cryptographic operations.
2. (Original) The apparatus as recited in claim 1, wherein said one of the cryptographic operations further comprises:
an encryption operation, said encryption operation comprising encryption of a plurality of plaintext blocks to generate a corresponding plurality of ciphertext blocks.

Application No. 10800938 (Docket: CNTR.2072)
37 CFR 1.111 Amendment dated 02/03/2008
Reply to Office Action of 11/13/2007

3. (Original) The apparatus as recited in claim 1, wherein said one of the cryptographic operations further comprises:
a decryption operation, said decryption operation comprising decryption of a plurality of ciphertext blocks to generate a corresponding plurality of plaintext blocks.
4. (Original) The apparatus as recited in claim 1, wherein said one of a plurality of cryptographic algorithms comprises the Advanced Encryption Standard (AES) algorithm.
5. (Original) The apparatus as recited in claim 1, wherein said one of a plurality of cryptographic algorithms comprises the Digital Encryption Standard (DES) algorithm.
6. (Original) The apparatus as recited in claim 1, wherein said one of a plurality of cryptographic algorithms comprises the Triple-DES algorithm.
7. (Original) The apparatus as recited in claim 1, wherein said cryptographic instruction is prescribed according to the x86 instruction format.
8. (Previously Presented) The apparatus as recited in claim 1, wherein said cryptographic instruction implicitly references a plurality of registers within said microprocessor.
9. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:
a first register, wherein contents of said first register comprise a first pointer to a first memory address, said first memory address specifying a first location in memory for access of said plurality of input text blocks upon which said one of the cryptographic operations is to be accomplished.

Application No. 10800938 (Docket: CNTR.2072)
37 CFR 1.111 Amendment dated 02/03/2008
Reply to Office Action of 11/13/2007

10. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:
a second register, wherein contents of said second register comprise a second pointer to a second memory address, said second memory address specifying a second location in said memory for storage of a corresponding plurality of output text blocks, said corresponding plurality of output text blocks being generated as a result of accomplishing said one of the cryptographic operations upon a plurality of input text blocks.
11. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:
a third register, wherein contents of said third register indicate a number of text blocks within a plurality of input text blocks.
12. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:
a fourth register, wherein contents of said fourth register comprise a third pointer to a third memory address, said third memory address specifying a third location in memory for access of cryptographic key data for use in accomplishing said one of the cryptographic operations.
13. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:
a fifth register, wherein contents of said fifth register comprise a fourth pointer to a fourth memory address, said fourth memory address specifying a fourth location in memory, said fourth location comprising said initialization vector location, contents of said initialization vector location comprising an initialization vector or initialization vector equivalent for use in accomplishing said one of the cryptographic operations.

Application No. 10800938 (Docket: CNTR.2072)
37 CFR 1.111 Amendment dated 02/03/2008
Reply to Office Action of 11/13/2007

14. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:

a sixth register, wherein contents of said sixth register comprise a fifth pointer to a fifth memory address, said fifth memory address specifying a fifth location in memory for access of a control word for use in accomplishing said one of the cryptographic operations, wherein said control word prescribes cryptographic parameters for said one of the cryptographic operations.

15. (Currently Amended) The apparatus as recited in claim 1, wherein said cryptography unit executes said plurality of cryptographic rounds on each of a plurality of input text blocks to generate a corresponding each of a plurality of output text blocks, wherein said plurality of cryptographic rounds are prescribed by a control word that is provided to said cryptography unit, execution logic comprises:

a cryptography unit, configured execute a plurality of cryptographic rounds on each of said plurality of input text blocks to generate a corresponding each of a plurality of output text blocks, wherein said plurality of cryptographic rounds are prescribed by a control word that is provided to said cryptography unit.

Application No. 10800938 (Docket: CNTR.2072)
37 CFR 1.111 Amendment dated 02/03/2008
Reply to Office Action of 11/13/2007

16. (Currently Amended) An apparatus for performing cryptographic operations, comprising:
 - a cryptography unit within a microprocessor, configured to execute one of the cryptographic operations responsive to receipt of a cryptographic instruction ~~within an instruction flow~~ that prescribes said one of the cryptographic operations, wherein said cryptographic instruction is one of the instructions in an application program that are fetched from memory by fetch logic in said microprocessor, and wherein said microprocessor comprises an integer unit for executing integer operations prescribed by said application program, and wherein said cryptographic instruction comprises:
 - an algorithm field, configured to prescribe one of a plurality of cryptographic algorithms to be employed when executing said one of the cryptographic operations; and
 - algorithm logic, disposed within said microprocessor and operatively coupled to said cryptography unit, configured to direct said microprocessor to perform said one of the cryptographic operations according to said one of the plurality of cryptographic algorithms.
17. (Original) The apparatus as recited in claim 16, wherein said one of a plurality of cryptographic algorithms comprises the Advanced Encryption Standard (AES) algorithm.
18. (Original) The apparatus as recited in claim 16, wherein said one of a plurality of cryptographic algorithms comprises the Digital Encryption Standard (DES) algorithm.
19. (Original) The apparatus as recited in claim 16, wherein said one of a plurality of cryptographic algorithms comprises the Triple-DES algorithm.
20. (Original) The apparatus as recited in claim 16, wherein said cryptographic instruction is prescribed according to the x86 instruction format.

Application No. 10800938 (Docket: CNTR.2072)
37 CFR 1.111 Amendment dated 02/03/2008
Reply to Office Action of 11/13/2007

21. (Currently Amended) A method for performing cryptographic operations, comprising:
within a microprocessor, fetching an integer instruction from memory that prescribes an integer operation, wherein the integer instruction is part of an application program being executed by the microprocessor;
within a microprocessor~~the microprocessor~~, fetching a cryptographic instruction from the memory~~memory~~ that prescribes one of a plurality of cryptographic operations and one of a plurality of cryptographic algorithms, wherein the cryptographic instruction is also part of the application program being executed by the microprocessor; and
within an integer unit in the microprocessor, executing the integer operation; and
within a cryptography unit in the microprocessor, executing the one of the cryptographic operations according to the one of the cryptographic algorithms.
22. (Original) The method as recited in claim 21, wherein the one of a plurality of cryptographic algorithms comprises the Advanced Encryption Standard (AES) algorithm.
23. (Original) The method as recited in claim 21, wherein the one of a plurality of cryptographic algorithms comprises the Digital Encryption Standard (DES) algorithm.
24. (Original) The method as recited in claim 21, wherein the one of a plurality of cryptographic algorithms comprises the Triple-DES algorithm.
25. (Currently Amended) The method as recited in claim 21, wherein said fetching comprises:
prescribing the cryptographic instruction according to the x86 instruction format.
